

BUZZRACK e-Scorpion 2

The ultimate carrier for e-bikes

E-bikes tend to be heavy. Besides, they are equipped with a larger frame and big tire sizes. Thus, dedicated E-Bike rack designs should feature a high load capacity, elastic and adjustable frame fixations and a flexible tire size compatibility. The BuzzRack e-Scorpion 2 E-Bike Rack perfectly meets those needs.

In addition, users can install the rack on a car without carrying tools by an integral spanner design instead. The rack can tilt for tailgate access. When not in use, the e-Scorpion 2 folds for saving storage space and can be rolled away on its integrated wheels. The BuzzRack e-Scorpion 2 is as convenient as a suitcase, easy to carry and store.
